

Name of the product: Total Free Lotto

Domain: totalfreelotto.com

Twitter: a totally free to play lottery

Business explanation:

A web based lottery platform allowing people to play without paying a cent but win money if they successfully predict all winning numbers correctly.

How much is winning money:

It will depend on how many times did people play. The more people play many times, the larger the pool money. For each entry, will allocate \$0.001 towards pool money.

How to play:

Playing involves picking a total of 7 numbers; 5 numbers from 99 numbers and 2 bonus numbers from 99 numbers.

How will the website make money?

The website will make money purely from advertising. Will link the website will third party advertising portals like Google Adsense or ProperllerAds.

Will the website be profitable?

Per entry we budget \$0.001. Let's say our Cost Per Mille is \$2.

It means per entry, will generate \$0.006. If we get 100 million entries per month, it means will allocate \$100k towards pool money and in return will likely generate \$600 000.

But we should note that we can't exactly predict how much will generate because there are many factors coming in to play when it comes to how much Google AdSense or ad platforms pays out.

Where will the website get money to pay users in the early days

Will have to act like entrepreneurs. In situation whereby there is a winner, will increase the number of winners in order to reduce what we have to pay the actual winner.

We can also negotiate with the actual winner and tell him or her that actually we are a bootstrapped startup and we can pay via stocks.

Product description

Will have 3 draws weekly on Monday, Wednesday and Friday. Each draw will be done live via either Facebook, YouTube or TikTok by our CEO. The draw will be at 18:00 (time can still change).

The website will have three key features namely Results, History and Level.

Results – this feature will be accessible even without logging-in. With this feature, will publish the winning numbers and the number of winners. About publishing the names of winners, will discuss that.

History – one will access this feature only when logged-in. With this feature, one will see how he played previously.

*Levels – users will be grouped based on how many people they have referred to the website. If you have not referred people to the website, you will not see all numbers when playing. One will be able to see a list and names of people who created an account using his link.
